

# PRESCRIPTION SPORT-EYEWEAR

SKI | MOTOCROSS | ENDURO | MTB | SHOOTING

## SK-X<sup>®</sup> NETWORK FOR YOUR GOGGLE

Highest quality is not only in your glasses, but also in our network of opticians through whom you can purchase your sports glasses with SK-X<sup>®</sup> technology.

You can find an optician near you at  
[www.sk-x.eu/optiker-finden](http://www.sk-x.eu/optiker-finden)

However, you are also welcome to ask your optician to become part of our network to conveniently obtain your glasses as before.

## SK-X<sup>®</sup> TECHNOLOGY

SK-X<sup>®</sup> technology turns your sports glasses into a performance product. The customized optical lenses are integrated directly into the glasses, creating a new dimension in image quality.

Around 30% of all athletes completely forego correction of their defective vision during sports. In doing so, they endanger not only themselves, but also everyone else on the ski slopes or motor sports tracks.

Others are not aware of the risk of injury from wearing glasses underneath their ski goggles. Fogging up of goggles or clip-in systems under ski goggles or problems with contact lenses in high altitude air are reasons why people often do without a correction.

An optimal correction offers you many advantages in sports. More safety on the ski or motorcycle, better anticipation and coordination lead to much more enjoyment in sports.

**Act instead of react.**

**Do without compromises and experience the freedom of optimal vision.**

For more information, visit [www.sk-x.eu](http://www.sk-x.eu) or contact one of our many opticians in the optical ski goggles network:  
[www.sk-x.eu/optiker-finden](http://www.sk-x.eu/optiker-finden)

# VISION – PERFORMANCE – FUN

### FEEDBACK

*„The biggest difference with the new goggles, when compared to my old ones with the clip-in, is that I can see much better all the little mounds and clods on the slopes, which makes me more confident and gutsy when carving. Also, the new goggles are much easier to clean and handle during skiing.“*

*Marusa B., Maribor (SLO), 11 years old*

# HANDLING INSTRUCTION

## After purchase

Wear your glasses with SK-X® technology at home in familiar surroundings to get your eyes used to the visual impression.

Due to the curved lenses, there may be a short acclimation period.

Make the first descents or exits deliberately slow and careful.

Always use the supplied case for transporting the glasses to prevent damage to the glasses.

## Use of your goggles with SK-X® technology

If goggles are wet after use (foam), allow to dry in open air (not in case).

To avoid a wet foam, wipe the helmet briefly before putting the goggles on the helmet.

Clean outer lens carefully under running water. Do not use rough cloths to avoid scratching the sun lens.

**Never clean optical lenses with anti-fog technology with a damp cloth.**

## After the season

### REPAIR SERVICE:

If your glasses have a scratched lens after an intense season, the prescription changes or the frame has defects...

**> Each part of the glasses can be replaced separately. It is not necessary to replace the whole system.**

## POC Opsin Clarity

The POC Opsin Clarity is characterized by its slim design.

Since the optical lenses are positioned very close to the eye, similar to everyday glasses, the optical lenses are no longer perceptible thanks to the integrated SK-X® technology and you enjoy an enormous field of view without any restrictions.

The edges of the optical lenses are no longer noticeable and you enjoy an enormous field of view with no restrictions.

## Successful collaboration

Founded in Sweden in 2005, POC is one of the leading manufacturers of helmets, goggles, clothing and accessories for cycling and winter sports. From the beginning, the focus has been on more safety for all athletes - a vision that we at SK-X® optical solutions share 100%.

Thus, we complement each other in the claim to guarantee more safety in sports, as well as more enjoyment in sports.

The POC Opsin can be combined in four versions.  
Each customer can put together his dream goggles.

## POC | OPSIN CLARITY

With the cylindrical lens from Zeiss, the Opsin Clarity offers an extremely wide field of vision for added safety.

**Ideal for medium face sizes.**

The Opsin Clarity's triple-layer foam and soft PU frame ensure that the goggles remain comfortable and flexible at the same time, even in the coldest conditions. It is ideal for medium face sizes.

With the lens pulled far back, it offers an ideal field of vision for greater safety. The ski goggles come with a Zeiss Clarity category 2 sun protection lens in two different colors, VLT22%.

*For technical information on the filters, see page 27*

# DESIGN DESCRIPTION

## **sk-x**<sup>®</sup> ADAPTER SYSTEM OPTICAL SOLUTIONS

The patented SK-X<sup>®</sup> adapter system for ski and motocross goggles was developed to make winter and motor sports safe for goggle wearers. Because more safety also brings more joy to the sport. Everyone can venture a little closer to their performance limits.

- **FRONT SCREEN** – original from our brand manufacturers
- **3D-FULL-RIM-ADAPTER** – brings the optical lenses closer to the eyes and helps prevent fogging of the lenses
- **CARRIER LENS** for the installation of the optical lenses
- **HIGHLY CURVED OPTICAL SPORTS LENSES IN FREE-FORM TECHNOLOGY** for optimal imaging right into the periphery

The design also allows for subsequent replacement of the front lens (e.g. after scratching) or of the optical lenses in the event of a change in power.

# sk-x<sup>®</sup> SQUAT

OPTICAL SOLUTIONS

The first steps in the development of optically glazed ski goggles were taken exactly 10 years ago. Therefore, it is even nicer that we can now present the first ski goggles under our own brand SK-X<sup>®</sup> for this anniversary.

The SQUAT model is available with a black frame and two different lens colors: **orange blue mirror (Cat. 2)** and **orange-brown red mirror (Cat. 2)**.

These all-round lenses come from ZEISS and guarantee the highest image quality and optimum protection in all light conditions.

LENSES BY  
**ZEISS**

*For technical information on the filters, see page 27*

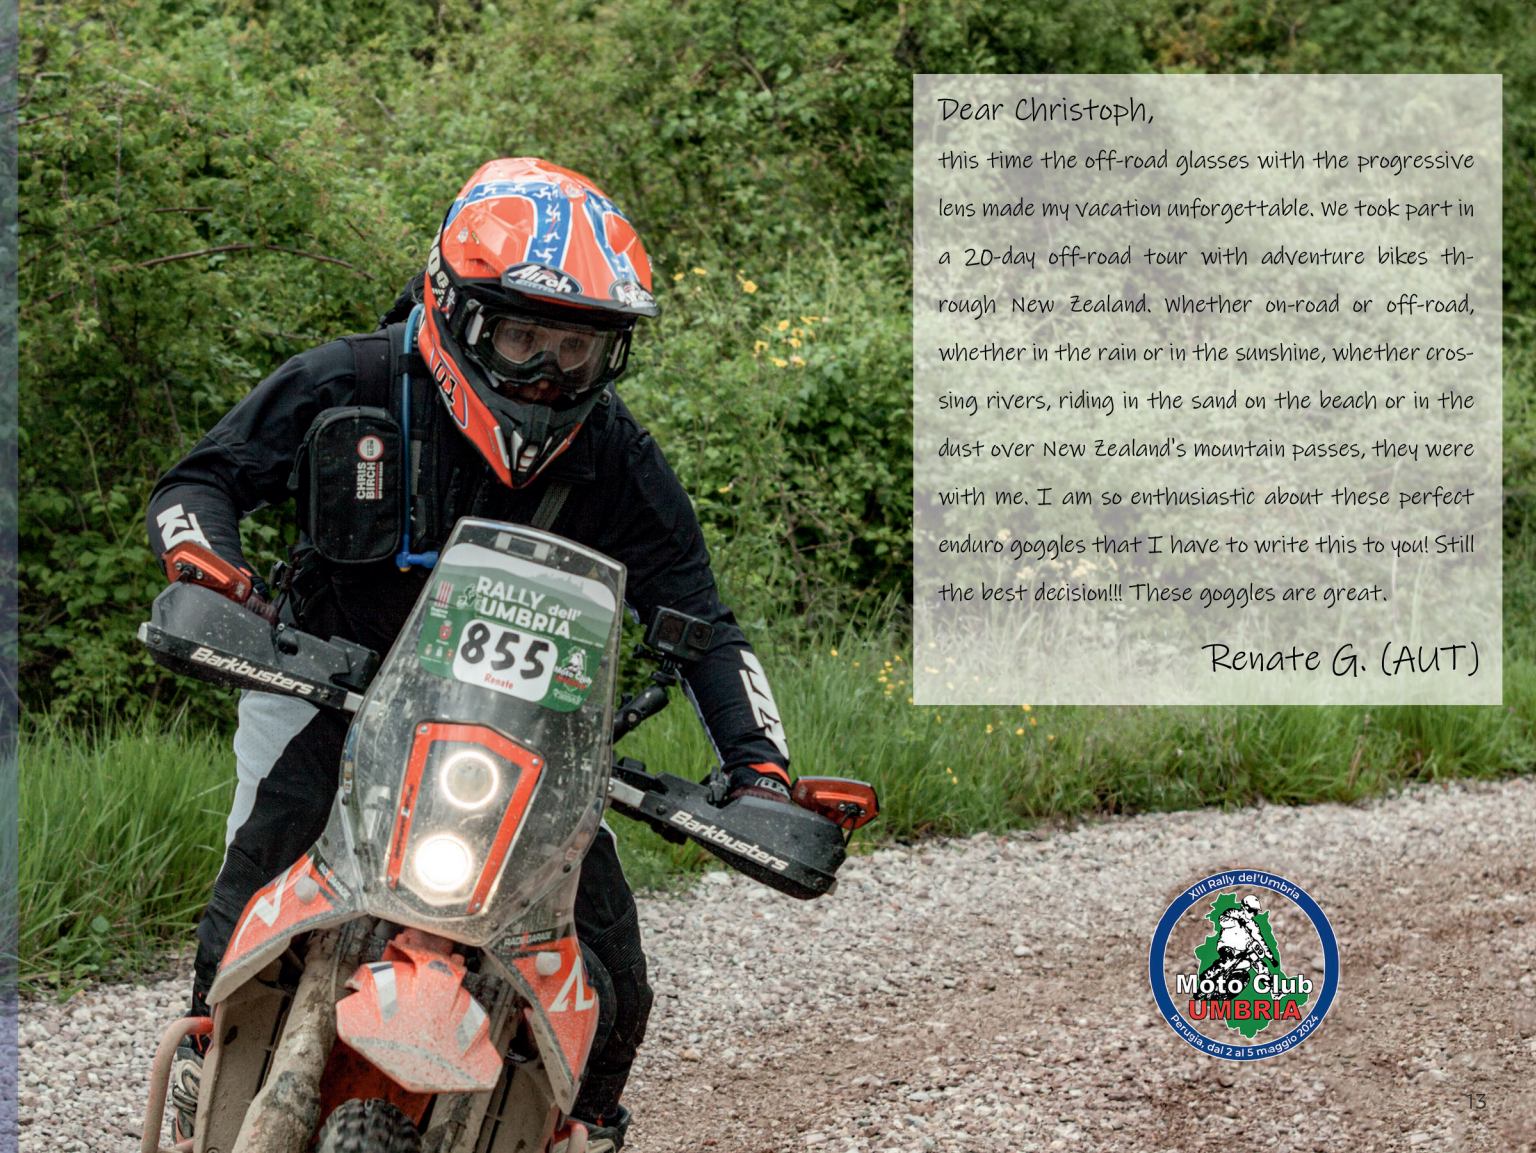

**NEW: The SK-X<sup>®</sup> SQUAT is now available without optical lenses.**  
The filter lenses are identical to those used in optical glasses.

# sk-x® FEEDBACKS

„I used them skiing for the first time this winter. I was in Utah and Colorado. Just want you to know they are FANTASTIC. They were progressive lenses and I used them in all conditions, cloudy and sunny, bumps and powder (68 cm fresh snow in Utah). No problems, no headaches, were an instant improvement. Love the product, worth every penny (centime).“

S. Bern (CAN)

Dear Christoph,  
this time the off-road glasses with the progressive lens made my vacation unforgettable. We took part in a 20-day off-road tour with adventure bikes through New Zealand. Whether on-road or off-road, whether in the rain or in the sunshine, whether crossing rivers, riding in the sand on the beach or in the dust over New Zealand's mountain passes, they were with me. I am so enthusiastic about these perfect enduro goggles that I have to write this to you! Still the best decision!!! These goggles are great.

Renate G. (AUT)

Lens Colors: LST bright Vario blue mirror | LST active silver mirror | LST active red mirror | LST active blue mirror  
 LST space light | LST grey silver light  
 For technical information on the filters, see page 27.

# EVIL EYE | PEAKSIGHT

With the Evil Eye E604 Peaksight Silhouette combines form and function in a performance goggle.

The optical lenses are installed in the fixed LST bright double lens with SK-X® full-rim adapter, and there is also a flexible attachable additional lens to be able to react quickly in changing light conditions.

„With the SK-X glasses, I've had nothing but the best experiences so far. Skiing has become much easier for me, especially in poor visibility. I haven't had any issues with the glasses fogging up, even in extremely cold temperatures.“

"I've used the glasses for over 200 ski days now, and I can't imagine skiing without them anymore.“

Harald Koidl (AUT) - [www.alpincenter-wildschoenau.at](http://www.alpincenter-wildschoenau.at)

## ATOMIC COUNT JUNIOR

The proven junior ski goggles from Atomic impress with an extremely large field of vision. Of course, the technology and lens size as in the adult goggles are also used here. For technical information on the filters, see page 27

*lens color: stereo green-yellow red mirror*

HOW YOU SEE THE WORLD...  
... THIS IS HOW YOU MOVE

# ATOMIC | COUNT

The Atomic Count Stereo is a premium all-mountain ski goggle that offers excellent vision.

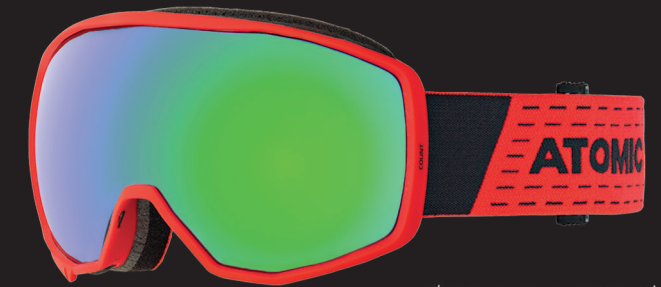

Its spherical double lens is equipped with Stereo Lens technology - this provides nine layers of high-quality mirroring for glare protection and 100% clear vision.

In addition, there is the Live Fit frame, which automatically adapts to the contours of the face directly when you put it on and ensures an optimal individual fit from the first moment.

*For technical information on the filters, see page 27*

*stereo brown contrast silver mirror*

*stereo orange green mirror*

**LIVE FIT**

The three-layer foam fits stably to your face for an optimal fit.

**OPTICS**

The multi-layer treatment of the lenses protects against glare and rapid eye fatigue. They feature a hard coating and anti-fog layer. The spherical double lens provides a huge field of view.

# ATOMIC REVENT Q

Premium ski goggles for allmountain riders with Live Fit

# ATOMIC | REVENT Q

The Atomic Revent Q has been a staple of the SK-X® portfolio for several years due to its high quality.

With its medium-sized frame, it fits most faces. Its Stereo Multilayer coating further protects the eyes from glare and fatigue.

Live Fit ensures an individual fit because the frame automatically adapts to the contours of the face and sits optimally all day.

## Lens Colors:

- Stereo black (3) - Sun
- Stereo gelb-braun blue mirror (2) - Allround
- Stereo violett blue mirror (2) - Allround
- Stereo rosa yellow mirror (1) - Fog

*For technical information on the filters, see page 27*

## Winner SILMO D'Or | Category Sport | Paris

**Our patented optically glazed ski and motocross goggles guarantee the best vision during sports.**

They are currently available for the brands Atomic, Adidas, POC, LEATT and ride100%.

The lenses used in free-form technology support peripheral vision and thus the balance system and coordination skills.

Customer feedback tells us that athletes feel much more confident and tire less quickly, showing positive effects on performance.

**Around 30% of all spectacle wearers are on the ski slopes and motorcycle tracks without adequate correction of their defective vision. And this despite the fact that experts believe that around 80% of all ski accidents occur due to perception errors.**

Winning the Silmo D'Or, the Oscar of ophthalmic optics, has brought us a big step forward in our efforts to make the slopes safer.

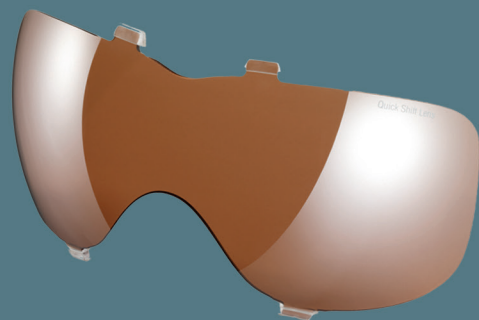

# ADIDAS ID2

The sleek ID2 ski goggles ensure a perfect fit even under a helmet with their clever double frame construction. The spherical anti-fog lenses, together with the waterproof foam padding, ensure a wide field of vision without fogging.

The quick-shift-lens (QSL) is a dark additional lens that allows you to react quickly to changing light conditions. This model can thus be used flexibly in both very poor and very good light conditions. A real all-round talent.

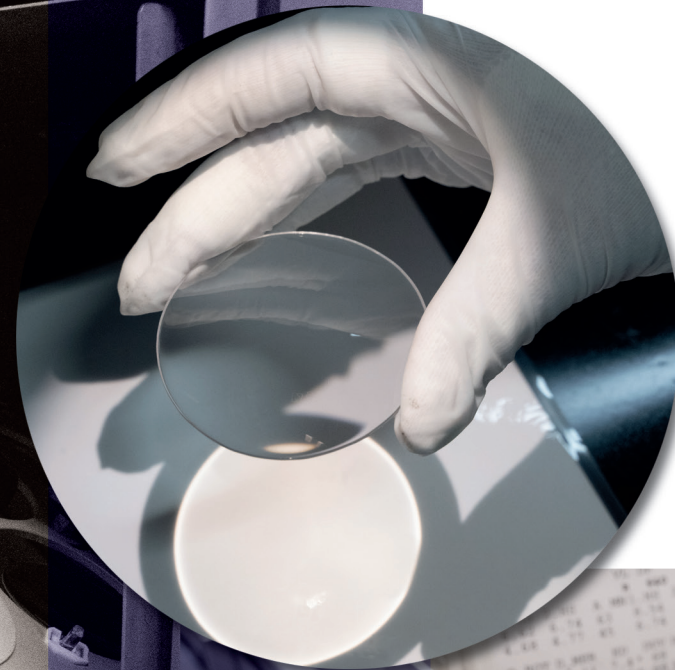

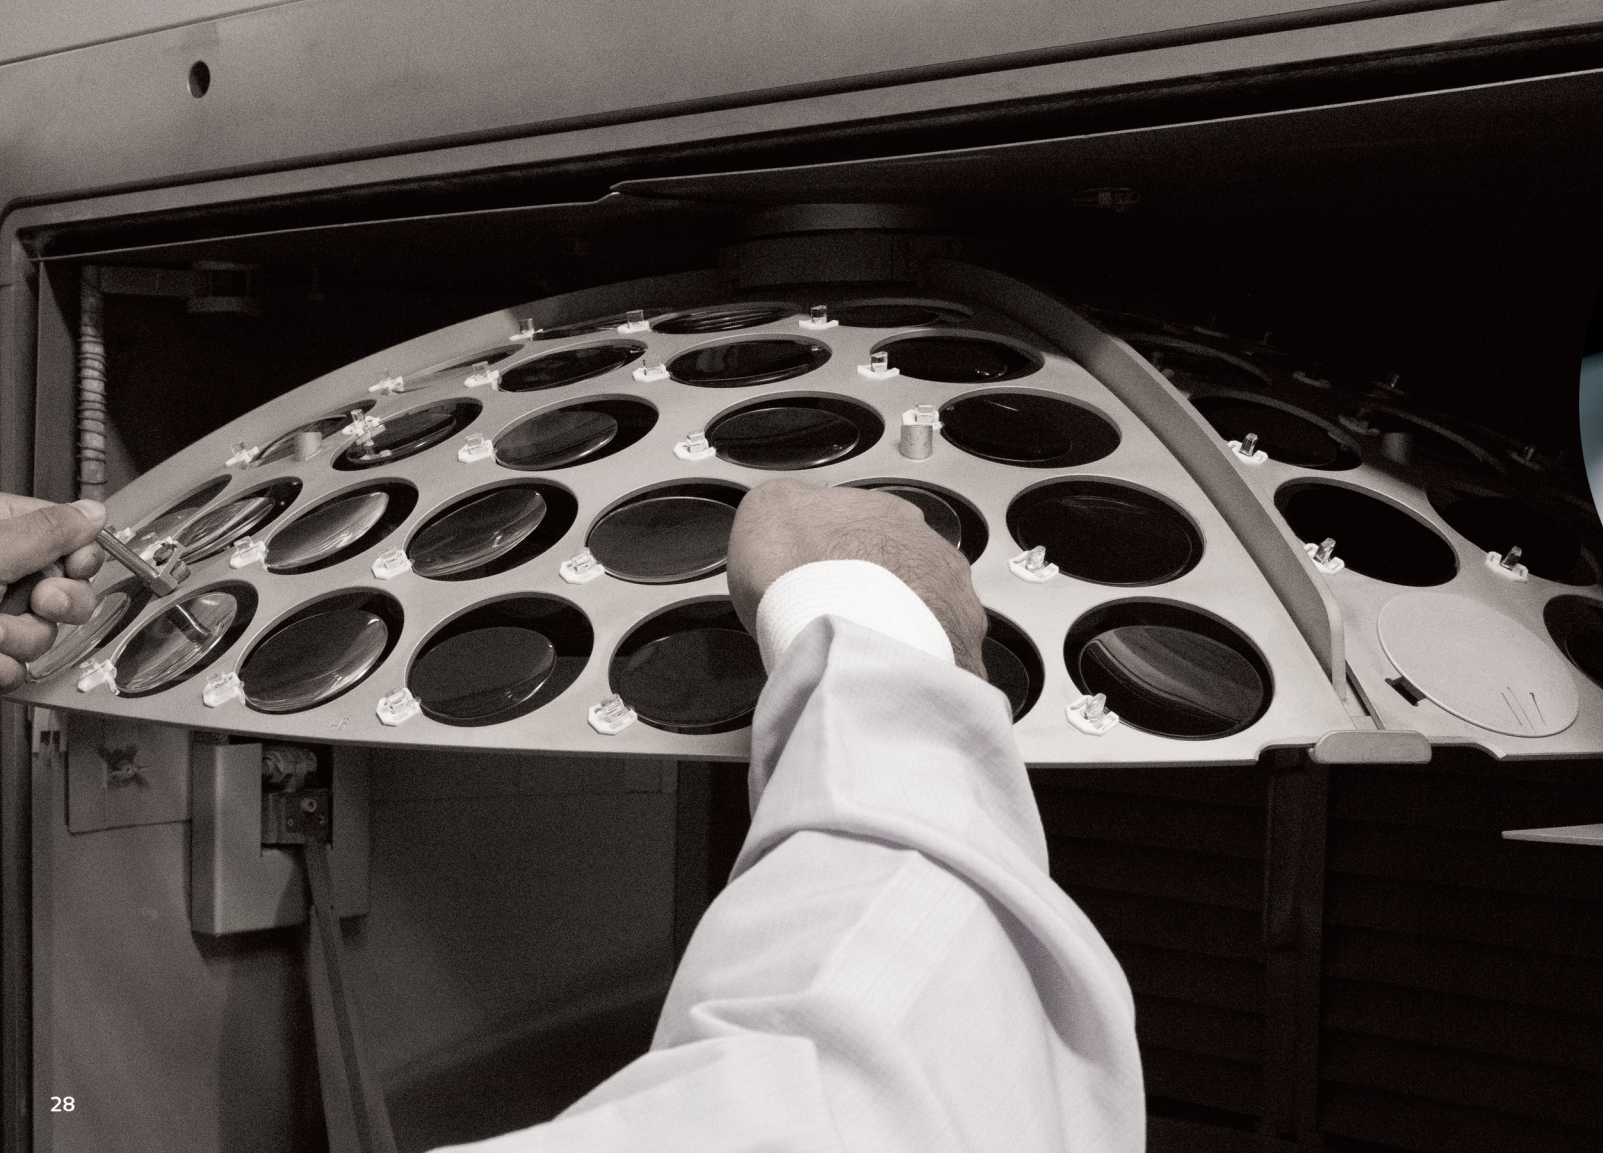

*For technical information on the filters, see page 27*

Seeing beyond

## ZEISS GLASSES FOR SPORT

are attractively thin and razor-sharp right to the edge thanks to Cosmetic Edge® technology. This guarantees flawless vision all around and at the same time protects against dust, dirt, sun or flying particles. Whether cycling, racing or water sports, tennis, soccer or golf.

Lens color: clear & persimmon

# MOTOCROSS | ENDURO | MTB

The SK-X® solution is now also available for toric lens systems. This means that we can now also optically glaze motocross goggles.

The California-based company **100%** was founded in 1982 and is one of the leading brands in motorsports worldwide. Especially in motorcycle sports, 100% has been able to re-establish itself in recent years as the market leader in the field of protective eyewear.

With the model Armega we rely on a proven product from the portfolio of 100%. The goggle design favors the processing of the SK-X® technology and both systems together provide an excellent overall product for the toughest missions.

In combination with the SK-X® full-rim adapter, it offers optimal viewing quality for more information and thus more safety on the bike.

*For technical information on the filters, see page 27*

# LEATT

The company founded by Dr. Chris Leatt in South Africa in 2001 is now one of the most important companies in the world when it comes to safety in motorsports.

Revolutionary was the invention of the Leatt® Neck Brace to prevent severe head and cervical spine injuries in motorsports.

Over the years, Leatt has now grown into a complete motorsports supplier and has developed an outstanding product, the **Leatt Velocity 6.5**, which we have newly added to our portfolio with the 2021/22 season.

The bulletproof front shield in combination with SK-X® technology offer the perfect combination of safety and riding fun through optimal visibility.

*For technical information on the filters, see page 27*

*Lens color: light grey*

# SK-X<sup>®</sup> SHOOTING GLASSES

OPTICAL SOLUTIONS

**Shooting more than one discipline?**

**You no longer want to compromise on your vision?**

**You want to combine safety with precision?**

The SK-X<sup>®</sup> shooting glasses innovation now makes the sports glasses a multifunctional talent.

With the specially developed adapter system, we combine the advantages of several manufacturers into an innovative overall package.

The optical lenses can be installed in the sports glasses themselves as well as in the glass carrier ring in combination with or without an iris cover.

The modular system of MEC shooting glasses allows a quick change of optics. The optical lenses can be manufactured in all tints and also self-tinting.

Thus, these multifunctional eyewear can be used for both, static and dynamic disciplines.

# SHOOTING GLASSES

Shooters of air pistols, air rifles, bows, crossbows, handguns and long guns have one thing in common: they must be able to rely one hundred percent on their eyesight.

During training and competition, their eyes often have to adjust to different light conditions, contrasts and depth of field - sometimes within fractions of a second.

Sports glasses not only protect your eyes - they also improve your ability to concentrate in addition to your vision.

The perfect interaction between your eyes and your hand helps you place your shots even more accurately, making your hit more precise.

Protective lens of the sports glasses also available optically and in numerous colors as well as self-tinting.
